

# APPLICATION DEVELOPMENT AND SYSTEMS INTEGRATION

Technology drives business performance. To remain competitive, businesses must continuously streamline and automate processes to increase productivity and reduce costs. And they look to their IT department to make that happen.

Capstone Consulting provides custom application development and systems integration services to help clients improve business performance and maximize IT investments. Using a broad range of network, database and application technologies, we develop solutions that improve productivity, reduce costs and increase collaboration between all areas of the business.

Services are designed to help you:

- Create custom applications that enhance and automate critical business processes
- Integrate existing and new applications with your overall systems architecture
- Capitalize on emerging technologies to maintain your competitive advantage
- Decrease time-to-market of critical business functionality without sacrificing quality or security
- Develop and integrate applications that provide significant return on investment

Our consultants can serve in a variety of capacities to deliver the best possible solution for each project. Whether you need a completely outsourced solution, an additional team member to work in conjunction with your internal staff, or an experienced mentor to provide direction and guidance, we can help.

Capstone's application development and systems integration services are designed to help you increase the functionality and performance of your technology without compromising priorities or resources. Our consultants offer proven solutions to help you architect, deploy and integrate successful enterprise applications using a broad range of technology expertise.

Building **Solid** Enterprise **Solutions**

### Broad-based Expertise

Capstone's senior-level consultants have experience and expertise in a broad range of technologies, including:

- Java
- J2EE
- ASP/.Net
- XML
- Portal
- Oracle
- SQL Server
- TIBCO
- COGNOS

### A Proven Delivery Method

Capstone uses the Rational Unified Process (RUP) methodology combined with core Agile principles to architect and deploy successful enterprise solutions. Tailored for each client and project, this comprehensive, iterative approach uses milestone checkpoints to ensure projects stay on track and business needs continue to be met. The result is on time, on budget implementation, and a smooth transition to the new solution with minimal downtime.

### A Holistic Approach

Successful application development and integration requires a thorough understanding of existing IT infrastructure and business processes. Capstone partners with both your IT department and business units to determine how a new application or upgrade may affect existing systems and processes throughout the enterprise. Our consultants provide strategic direction and guidance to minimize risk and ensure optimal, long-term results.
